

Chapter 1

INTRODUCTION

1.1 Introduction

Computer in modern life have become a tool to make life faster and easier. With the advent of computer network people started using computer for sharing of many resource.

Data is one of these resources. Now a day all kind of information news, global data to local data and thousands of books found over the internet. Today to be in touch with the rest of world or to keep up-to-date information about the events occurring in the world it is not necessary to waste time in searching from news in the newspaper. All kinds of information are available on the internet, and this information is presented in so many user friendly ways that within a few seconds you can get details of the exact news or event you are interesting in.

The internet has firmly established as a new worldwide communication medium that leads itself to the particular needs of international dialogue. Messages can be send and receive around clock, and no one need answer a phone or be in office for message to forget through. No telephone tag, no waiting on mid night calls Resource quick and efficient. The international become a vast distribution system for any things Internet become a worldwide data collection vehicle for many type of marketing research, including business-to-business as well as consumer research. It will soon provide a cost-efficient medium for conducting researching, at least in the United States, Canada, Western Europe and many parts of Asia, Upper income, better educated household system and vast majority of significant business will subscribe to and use the internet within the next two to three years. Already, in the United States, about 42% of adult has access to internet at home or at work.

1.4 Main Aim and Working Environment

The aimed at developing an online website in which jobseekers can register themselves online and apply for jobs. This system provides online help to the user. This website plays very important role to simplify the requirement process.

Our jobseeker can view jobs. User select job related to that category are display to him. But to apply for a job he must have fill the application form. For this purpose, he has option to create an account in which he has to maintain personal information. To apply for a job, he has to fill the application form in which he has to give all information, qualification, experience and skills. He can also inquire about the job.

The administrator can perform all these tasks when is requires. First of all, administrator has to login himself through hid account and password.

Company has to create its accounts, in which it has to give all information about itself and the job. Once company has registered itself he can view information about the jobs. Basically these jobs are offer and displayed to the user.

1.5 Hierarchy of Job
